The origin of the word monster takes us back to many centuries ago, during the Roman Empire; the term monstrosity (miracle, unique thing) was used to define something unique, which is usually out of character. Exotic animals such as armadillos, walruses and rhinos were considered real monsters among European civilizations, and the human imagination has created tens of thousands of such creatures since ancient times, but despite their age; Monsters became popular among the masses only in the Middle Ages. With the heyday of bestiaries, illustrated books that show strange or grotesque beasts, even more people began to be charmed by them in a very unique way; Just to name a few, the most famous of these are Ashmole Bestiary, Classic of Mountains and Seas, Northumberland Bestiary and Bern Physiologus. In each of these toms we can find both imaginary beings and the first descriptions of natural phenomena. Their popularity has exceeded the years, and even contemporary artists and writers such as Henri de Toulouse-Lautrec and Jorge Luis Borges have compiled their own bestiaries. Used to teach moral lessons to the greatest number of people, monsters are more than just fantastic beings, they are allegorical allegos that warn us of the dangers that man may encounter. For example, a creature built by Dr. Frankenstein explains the symbolic way that can happen if humans replace gods in the creation process, the result will be a living being, but absolutely imperfect. By the way, not all of them are afraid, monsters can also be positive characters that help people in their daily lives, and in 1995, a year before the release of Pokémon; Tecmo released a PlayStation game in which the main characters were cute & friendly monsters, its title was Monster Farm. These tips & tricks will help you get to the third dungeon and defeat the ultimate boss. Dad Management: Remove level 1 attack cards as soon as possible from healers. Improvisation is a good early card, but it can also be safely removed. Keep your dad as thin as possible so that your strongest cards are always in frequent rotation. Companions: Magic classes will find the most uses in sage and mage companions. Users based on crit prefer thief and monk. Bard companion bonuses are invaluable for each class. If you have difficulty surviving encounters, warriors, paladins and druid companions are priceless. Druid is especially good for classes that deal damage over time, such as Barbarian and Cleric. Captains: Upgrade your cards with captains in the first two dungeons. Use the captains on the third dungeon to get a big +3 AP bonus. Outbreaks: Health and mana bonuses from outbreaks are of limited use. Focus on getting an AP or alcohol to remove bad cards from your deck. Rogue and Wizard classes are divine and very easy to master. Ranger is well balanced and easy to cement wins. Knight is fine, but you have some problems with generating enough damage. The Mage's companion for his damage and the monk's companion for canceling enemy abilities are good companions for the Knight. Clergyman, Assassin and Barbarian require competent play and breeding runs with talent unlocked to be regular winners. Monster Slayer Tips: Class Wizard: Always select personnel with +1 download card for mana loading effect. Helps the wizard class clear their entire hand in one go. It also makes it easier to kill enemies without counter-play. The time bubble can also buy extra spins on tough enemies. Hunter: Focus on getting +critical damage modifiers for the final battle. Just a critic, you can break the trailer in one turn with a monk in the party. Killing Aura and Arrow Storm are also great late-game cards. Mighty Hit also becomes a nuclear card with AP stacking. Knight: Knights can stack block effects and item to punish enemies for hitting them. Thorns and immolation are two good cards to the knight's deck. Stack your health and lock up as much as possible to get as far as you can. Clergyman: Clergy are harder to win because they last forever to kill things. Many spells put Penance cards in your hand that do nothing but clog your queue of cards. Find magic support cards and build health to survive everything you fight for. Assassin: A killer can hit harder than a rogue, but he has less chance of direct damage. Instead, the killer relies on traps and hook shots that Bad against armor and high dodge opponents. Crit-build is the best option because the ability to duel is very poor due to lack of defense. Barbarian: Similar to Brute and focuses on criticism and stacking health. It's hard to Speed clear with barbarian because most of his skills do damage to himself. Druids and warriors are especially helpful to keep the Barbarian up. General Losing Advice is good even if it sucks. You gain fame, which can be brought to new talent before choosing a new starting class. This will help you be on top of your HP when you face the last level boss. Some classes are better than some bosses than others. This should be taken into account when choosing the areas you want to go to for each character you play. Monster Slayers clues will appear over each monster before you fight it. Pay special attention here to the enemy's abilities and resilience to better plan your attacks. Attacks.
